Education

06/26 - 06/26

Y Combinator Startup School 2026, Paris, France

- Selected as a hand-picked attendee for YC's one-day Startup School in Paris at Station F, gathering builders, engineers, and founders from across Europe for talks and sessions with YC partners and founders from Supabase, Datadog, Posthog, AMI, and others.

09/25 - 08/28

Technical University of Munich, Munich, Germany

- Bachelors(Studienkolleg), Computer Science
- Note 1.0(GPA 4.0) - **Valedictorian**
- Courses: Advanced Mathematics, Higher Physics, Linear Algebra, Calculus, Introduction to Programming

06/13 - 04/25

S. N. Kansagra School, Rajkot, India

- **Valedictorian** with 97% in Class XII, ranked among the **top 0.1% in India**.
 - Coursework: Advanced Mathematics, Computer Science, Advanced Physics
-

Experience

05/26 - Present

SWE Intern at Stealth Startup, Germany

- Making visible change with voice AI

03/26 - 05/26

Working Student at SCAILE, Germany

- Building the product curated to client requests.

05/25 - 03/26

Freelance Fullstack Engineering, India & Germany

- Designing and building websites for small local startups, focusing on responsiveness, speed, and accessibility.
- Developing custom solutions using React, Next.js, Java, Python and Node.js for clients in education and retail sectors.

07/25 - 09/25

SWE Intern, Sigmoid AI, India

- Contributed to the development of a unified marketplace platform that simplifies the integration and deployment of autonomous AI agents for business operations.

04/25 - 07/25

Computer Science Tutor (Internship) – S. N. Kansagra School, Rajkot, India

- Taught programming fundamentals and algorithms to high school students.
- Helped students prepare for national-level coding competitions and board examinations.
- Simplified complex computer science concepts through real-world analogies and project-based learning.

Extracurriculars

06/26 - 06/26

Pyra (github.com/DocMorphic/pyra)

- Built a digital-twin O&M console for utility-scale solar plants that detects underperformance, explains the cause, and quantifies the euros lost per inverter.
- Trained my own per-inverter ML model (HistGradientBoosting on each unit's healthy year) to benchmark live performance. Built with Next.js 16, Python (scikit-learn, pvlib, pandas, duckdb), and Anthropic Claude powering the O&M Copilot.

04/26 - 04/26

Aliquot (aliquot-pi.vercel.app)

- Built an AI-powered experiment planner that converts plain-language scientific hypotheses into operational experiment plans with protocols, verified reagent catalog numbers, budgets, timelines, and per-claim confidence scores.
- Developed using Next.js 16, React 19, and Tailwind 4, with **Anthropic Claude** for AI reasoning, **Tavily** for vendor catalog search, and Supabase for data persistence.

02/26 - 02/26

Lighthouse (github.com/DocMorphic/lighthouse)

- Developing a mobile navigation application that utilizes open-source geospatial data for real-time mapping and routing.
- Built using **React Native** and **Expo** for cross-platform performance, integrating **OpenStreetMap** to render interactive, scalable maps.

02/25 - 02/25

Hashi (hashiii.vercel.app)

- **Developed** a web-based logic puzzle implementing graph-based algorithms for bridge validation and puzzle-solving mechanics.
- **Built** using **TypeScript**, **React**, and **CSS3**, deployed via **Vercel** for a responsive, cross-platform user experience.

02/26 - Present	Framed - Designing a competitive PvP arena fighter featuring a unique "window-based" environmental mechanic and fast-paced combat logic. Built entirely using GDScript, Godot, and Blender, incorporating custom physics and collision detection for non-traditional arenas.
05/25 - 06/25	Freelance-ez(freelance-ez.vercel.app) - AI-powered website builder for SMEs (Next.js, TypeScript, Gemini 2.5 Pro, Supabase). Users input company details, AI generates a complete multi-page website. - Lovable, but for a targeted audience.
09/24 - 12/24	Private Tutor at S.N.Kansagra School - Provided personalized tutoring in Mathematics, Physics, and English to secondary school students. - Developed structured learning materials and adapted sessions to suit different learning styles.
10/22 - 11/24	National-Level Athlete for Volleyball and Squash - Represented Gujarat state in volleyball and squash tournaments. - Trained regularly under certified coaches, competing in inter-state and district championships. - Learned teamwork, discipline, and mental focus through high-level competition.

Projects

- Developed a Python-based **IoT system** on **Raspberry Pi** using **SpeechRecognition** and **GPIO** libraries to enable **hands-free voice control** of home appliances via real-time signal processing.
- AI Health Chatbot** – Built from scratch using **Python** and **NLP libraries**, capable of answering health-related queries, generating basic wellness prompts and providing specific medications based on the symptoms.

Additional Information

- Languages:** English (Native), German (Native)
- Skills:** Mathematics, Machine Learning, Game Theory, Web Development, Electronics Prototyping
- Programming:** React, Next.js, React Native, Python, JavaScript, Typescript, Java (can adapt quickly to new languages or frameworks)
- Interests:** Artificial Intelligence, Autonomous AI Agents, Game Development, Human–Computer Interaction (HCI), Large Language Models (LLMs), Procedural Content Generation, IoT & Smart Systems, UI/UX Design

PS: I don't have much experience, but I'm a fast learner, and I've actually been told so by many people. I just want to learn from and work with the best people
